Steganography Tutorial - Hide Message Within Picture File

Dear HF,

I guess this is my first tutorial and thought this would be the right section to put it in. If it is not, please let me know. Not sure how many knows Steganography, but it is a creative and funny way to hide different kind of messages within different files. In this specific tutorial, we will focus on hiding a message within a photo file.

Steganography Definition:

/steg?'n?gr?fl/

noun: steganography

the practice of concealing messages or information within other non-secret text or data.

Step 1: Find your photo and write your message.

Choose your photo file and make a .txt file with the message, you want to hide.

Spoiler [\(Click to View\)](#)

In our case, our text will be "Hello World."

Spoiler [\(Click to View\)](#)

Step 2: Creating the final file in CMD.

Open up CMD and type the following command.

"cd desktop"

"Copy /b nameofphotofile.png + nameoftextfile.txt nameofyournewfile.jpg"

Spoiler [\(Click to View\)](#)

Now you have your file with the concealed message.

Step 3: Unveil the message.

If you want to find the hidden message inside the picture, you will have to open it with Notepad. Otherwise, if you open the file as normal, it will show the picture.

Great tutorial! Well done my man.

Especially for those who do not want to upload their files to some platform who might use their data for other purposes.

Thank you Loremlpsum! Appreciate it, there will be more tutorials to come.

Thought it was time to do something else than just Lounge threads and hopefully teach the community something new.
