Thread: [Enabling Net Framework on windows server 2012 r2](#)

notandres - *October 21, 2020, 3:36 pm*

Literally about to just sell my pc how much this has been frustrating me. But not matter what I do to enable/ install net framework I keep getting the error that I need to put it in the correct path after downloading the WIM shit to download it to, enabled the correct things inside group policies but still can't seem to download net framework. Please help.

visit following link to microsoft site & then download the offline installer & install it...

<https://support.microsoft.com/en-in/help/4054542/microsoft-net-framework-4-7-2-for-windows-server-2012>

Regards
Saket
