Thread: [IP grabbers](#)

russian - October 22, 2020, 12:06 pm

Gonna post this in beginner hacking since this was one of the first things I learnt so I'm assuming it will go here.

[the actual post!]

Couple weeks back I saw an IP grabber in the form of a gyazo link being used [screenshot tool] the domain may have been slightly different but I don't really remember since I've had some really busy few weeks recently and therefore was not able to carry on exploring on how the guy did it :sadface: [Lost the guy btw so can't ask him]

Any of you guys know this IP grabber?

Currently I only know of: [open to new suggestions :D]

IPLogger
Grabify

They're good but a lot of people know these and also the links are very sus.

Thanks.

IP Loggers are links that you send to people so when they open the links, their IP gets logged.

What you were doing was intercepting packets from IPs. You can do the same thing by initiating a MiTM Attack, routing packets through your own PC and checking Wireshark packets.
