Thread: [multi account snyke uid=4667696](#)

maldev009 - October 22, 2020, 9:08 pm

I am here too expose user id=4667696 @snyke@ and id=4140831 unknownproducts as the exact same person selling a rat here on hf. you can clearly see this by viewing the bitrat thread 6085937. i have asked Unknownproducts about his affiliation with snyke and he claims snyke is just a volunteer!!! unmasking because of the fact that snyke is also the legendary armada!! :D :D simple to prove just looking at armadas past post and cross referencing with snyke :D

any idiot can see this. if u pull apart orcus rat u can tell bitrat is simply an enhanced version of it. u can notice the similarities with the bsod process protect with bitrat and the default process protect with orcus which has blue screen of death on process termination!!! :D further u can see that the tor network is simply added upon dynamic dns which made orcus rat famous!! not only that they both use fastobjectlistview in the same code fashionables. watchdog persistence is an dead giveaway and unique to orcus rat until bitrat came along. as u can recall armada released the source for orcus rat to focus on "a new and improved rat product" which is bitrat. :D

looking back on snykes posts he has said that he has done time in prison and is from canada. is egotistical and arrogant in the same way armada was. u can tell by the way he exposed venom remote software for being a quasar copy and actively destroying sales. only days after his dispute it was cracked and leaked on a competing forum and sold rampantly around internet!! u can clearly see by viewings armadas old profile that he is continually checking up on his old id probably hoping for it to be unbanned???? find his old friends new usernames???????

many users know these facts!! how else can u expect someones rep to be higher than his goddamn post count!?!?!?! and to be in "legends" only months after he joined the forum. snyke has admitted many many times into being a multi account user "asked permission from omni". he knows way too much about this forum and the users in it for this not to be true.

bitrat cannot be trusted. snyke cannot be trusted. snyke? more like snake. and that snakes name is john armada revesz.

pls consider this before purchasing bitrat.

Antiquerra - October 23, 2020, 10:38 pm

the first difference with bitrat and orcus was with language they were coded in. the first one was coded in c++ and the later is with c# with .net dependency.

can you provided a side by side proof for this kind of claim?

Mister E. - February 9, 2021, 6:40 pm

Your a fucking idiot LOL

.... Legends are crew members you hobo.

No one replaces me, the "Legendary" Armada.

Omni wont allow it lmao. Fool
