Thread: [From html tags to new html page](#)

4nd1 - November 3, 2020, 8:04 am

Hi, is there a way to automatically copy text inside html tags (h1, h2, p, etc...) from different web pages to create a new page just with the chosen tags? The web pages are offline.

You can do a Python scraper in order to do that.

h3x0ne - November 3, 2020, 10:12 am

Write a Scraper or use some pre-build scraper.

This is good tutorial to start with:

<https://hackernoon.com/how-to-build-a-web-scraper-with-python-step-by-step-guide-jxkp3yum>
