Hello, my good old friend, Pathogen.

Is this crypter as good as Adrena (The best crypter that ever existed on HF)?

Thanks in advance for your upcoming mile-long reply and good luck with your sales!

Also, remember all Tor connections go straight through the Mossad Headquarters in Tel-Aviv.

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

How is the stub size after crypt BitRAT server ?

(Nov 12, 2020 12:59 AM)Fr3eD0M Wrote: [\[CITE\]](#) How is the stub size after crypt BitRAT server ? As stated in the original post, the loader/stub is ~40kb. So whatever BitRAT's size is +-40kb.

Hi as the guy said before me is the startup method only good for keeping the client still installed or it's not good without persistence kit ?

The startup will only ensure that the computer will execute after reboot. Process persistence is on my TODO list.

That's on the TODO list. But won't be any time soon. Customers have been more than happy, you can ask around.
