Thread: [I need help de-obfuscating this file](#)

neuroplay - November 15, 2020, 10:47 pm

Warning, it's huge. It was a LOT worse, with rot-13 obfuscation and base64 encoding. I've gotten this far, but I don't know enough code to replace all the variables. Can somebody help me?

(Warning, HUGE. The first few hundred lines are variable declarations, the actual code is visible if you scroll to the bottom. I "beautified" it to make it easier to read)

This is from bitrix script, right?

Check out how the decoded file looks like here: <https://www.screencast.com/t/OVeRJeFyEX8b>

It is from v20.0. If you want full decoded file, contact me or upload the original files.

It is from v20.0. If you want full decoded file, contact me or upload the original files.

It won't let me send a PM, but i've contacted you through chat. I'm not sure why you mean by upload the original file, though.

Here's the original:

filebin . net /nled4m4w1n3mbt2h/include1.php?t=5490o4jw

Figured it out!

Thanks.
