Thread: [Options to untraceable ETH/BTC - let's discuss](#)

Grimeta - November 17, 2020, 3:56 pm

[Option #1]

So I have read about all those mixers, but the fees are high (~3%+) and I don't particularly trust them.

[Option #2] I'm thinking deposit to exchange without KYC > withdraw to another wallet. Problem is, dex's that connect your wallet, obviously withdraws to the same wallet only. Meanwhile centralized exchange, allows you to withdraw to another wallet but they transfer same funds from the address you deposited into, that's no good.

Are there exchanges without KYC that processes withdrawals from a different address than the one you deposited into?

[Option #3]

Or do I go the hard way by

1. deposit eth into non kyc exchange
2. buy monero
3. withdraw monero
4. make anon transaction between my own 2 addresses
5. deposit washed XMR to non kyc exchange
5. sell XMR for eth and withdraw

I do not prefer option #3 because there are lots of transactions and I haven't used XMR ever, and am always nervous when depositing to exchanges.

Option #2 would be best but I don't know any exchange like that.

Thoughts? How would you go about washing your coins?

- 1) Use Samourai and Wasabi to mix your coins MULTIPLE TIMES.
- 2) Use VPN->RDP->VPN make an account at an online exchanger and withdraw crypto (you're able to withdraw only crypto as you haven't verify your acc with ID). Convert coins and withdraw.
- 3) Use VPN->RDP->VPN deposit to a gambling site and withdraw, then do tha 1).
- 4) Use VPN->RDP->VPN deposit to a switch-coins site and convert btc to xmr, then login from another rdp use other vpn and swap back xmr to btc to similar site like the previous one, you'll get fresh new coins.
