Thread: [Best modem/router to port forwarding RATs ports?](#)

aerohacker - November 21, 2020, 10:52 pm

What is the best brand/model of modem/router with Port Forwarding feature to open RATs ports?

Threatening - November 22, 2020, 11:31 am

Wouldn't do that on you're own router/modem lol get a vpn bro

Which VPN do you recommend?

xXSinistarXx - November 22, 2020, 10:58 pm

Like others above me have discussed, please get a VPN or VPS. Any stooge who knows any.run, hybrid-analysis, or uses wireshark can easily trace you back with a router. Now for VPNs, I recommend either Mullvad or nVPN.

Mullvad VPN has the benefit of being available on android as well so kill two birds with one stone. The problem with mullvad is the fact ports are selected for you and you cannot choose which port you want. Also depending on which shared server you use, I notice the IP is sometimes this is not truley static. Thankfully, this is easily resolved by just refreshing the vpn a couple times though a minor annoyance. Use a quality DDNS (not no-ip) if you are worried. This is my personal choice and I get around the refresh issue just fine without a DDNS.

nVPN is truly a static vpn as you can purchase a dedicated IP. It is also quite easy to setup and has more payment options beyond paypal/btc. Many users in hack forums trust it and it has a great reputation.

Now for a vps. I am not as familiar with the market but I have been looking myself. A buddy of mine recommended me lyrahosting (<https://lyrahosting.com>) which has good rates for a vps. Also I noticed you can pay in monero which adds some additional anonymity which is appreciated.

Hope this info helped.
