Thread: [DarkHTTP Loader \[LAN SPREAD WORKING\] \[STEALER\] \[USB SPREAD\] \[WORM VIA RDP\]](#)

Freak_OG - December 1, 2020, 2:58 pm

includes over 17 commands, some which arent listed in panel, panel is very smooth and stable, you are able to get output from bots in panel as well. stealer works for chrome, firefox, ie, edge, and opera, also include keylogger.

worm functions are brute based, using 226 usernames and 1600+ passwords for the following protocols (all payloads have been tested manually and are working 100%)

SMB

MSSQL

RDP

also has USB .lnk folder spread

also includes domain name generation amount based off of dogecoin address! simply send 1 DOGEcoin and u will generate a new domain for cnc that you can register.

the bot also includes a mimikatz like functionality of dumping lsass.exe and replaying current pc creds across network to gain access.

screenshots of panel:

anyone interested in buying hmu on telegram or discord, price is 50\$ per build.

Sounds interesting, Are you using a modified VertexNet Panel by the way?

Spoiler [\(Click to View\)](#)

there is some more misc commands in the bot, like, get username, current path of bot.

also I forgot to mention there is a discord token stealer in it too.

heres an example of the stealer and keylogger functionality in panel, it works very smoothly.

I dont think a loader should be having unnecessary feature like flood also you still haven't provided a dyncheck runtime scan on your thread which is very important for a loader. Filesize info missing, does it contain additional DLLs, overlays, TLS, just one section of code?,exit from the LOW?, geo targetting feature?,how is the bot loading the EXE load library? does the file gets dropped to disk and then executes?regsvr32?. update ur thread with this information anyways not expecting much from a 50\$ loader from HF. GLWS

A loader with some botnet features like stealer, keylogger, flood etc for 50\$ only means that is a copy/paste from a public botnet, so RT detection will be so high that it will be totally useless.

Anyway I hope I'm wrong and that OP is not another scammer. GLWS

xZalurex - December 5, 2020, 2:50 pm

ill take the source code if thats cool. ill give you \$10 for the source code lol

?BADMAN? - December 10, 2020, 5:41 pm

Looks decent but why C# ?
