Who the hell uses NanoCore in 2020? Also of course the VT scan came out FUD, You scanned an encrypted rar.

Yep, it's infected lol.

Analysis: <https://app.any.run/tasks/90126d5f-0fc7-47eb-ad21-fbfee83cb7d8/>

Its nanocore but I updated it to use Pastebin and try to Lan spread on every instance, oh and it's undetected :3

And you modified the obfuscated and/or broken SRC just like that huh? What method are you using to spread through LAN?

it took me days to get the source working as I downloaded it from a random German NN forum and I used my own lan spreading method that I won't disclose as I don't want it to get patched/copied

You don't want it to get patched or copied yet you release a program that uses the same method for free?

Shhh we don't speak about how shit I am at coding just because I copy 98% of the code from random NN forums, Learn from my mistakes and do it better :)

GOSSIP GUY - December 3, 2020, 1:06 pm

You seem like a interesting member. Thanks for the share. I'm guessing it downloads+executes all my bots to you, but still. Thanks! Maybe I'll check this out. Can you give us any more information on the LAN spreading method though? I might have some freelancers on large networks. Please let me know.
