Thread: [Spoof/amp server how to?](#)

atomic666 - December 3, 2020, 11:38 pm

Hello im looking for a tutorial on how to set my spoofed server for dns amplification if anybody has a good tutorial plz link it thx u vry much :)

Haaks - December 16, 2020, 8:25 am

Hello. Are you searching for a spoofed server. Or are you serching for a option for how to make a server sent spoofed packets?

atomic666 - December 16, 2020, 9:21 pm

Both if possible a good host for it would be nice 2 if you have some idea

Foggy - December 17, 2020, 12:10 am

I too would like the same information if you could provide it, either Atomic666 or Haaks.

My discord is foggyzebra#0472 (all lower case}

I provide spoofed servers for amplification. I will gladly help you setup any amp scripts for your purposes. Send me a PM or Convo.

Hi,

I am looking for a server where I can spoof attack. Can you help?

Start a convo with me or message me on telegram. I can provide you with spoof enabled servers.

Red right hand - March 9, 2021, 11:53 pm

Pre sure for amplification attacks you need to first have a good list of memchace servers but I could be wrong

That's just one AMP vector. There are tons. Any service that replies to a query with a reply bigger than the query can theoretically be used for amplification. DNS and NTP are the most popular due

to the amplification factor and the fact that there's tons of vulnerable vectors. Scanning for them is easy enough. Send out a ton of queries and see who replies.

Beleive it or not HF has a goldmine of amplification tut's made pre ddos/topic Ban that you can still pullup with the right query

I couldn't find it. Dm me any questions you have I can help you. Amplification isn't too hard at all and there is plenty of information on google and github.

its one of the most popular amplification vectors today.

I don't run ddos attacks, but its easy to find thousands of vectors within a few minutes.

yes its obvious you dont

Red right hand - March 13, 2021, 3:45 am

Id recommend you pm a user called gigabot

Just by reading his posts it's obvious he's a beginner and doesn't offer any services. Not sure how he would add to this conversation or help OP

One of his posts is asking how to use the "public TCP-AMP.c" script and saying he would pay for spoonfeeds. Being in the scene for a while doesn't mean you are knowledgeable.
