WORKING: The Indicator is fully functional.

UPDATE: Telegram bot has new collective intelligence feature | Indicator has been updated to (v2.1.6) | Discounted price starting from 15-58%

RESURGENCE TRADING: RT x Predictum [Indicator #1] -

In-depth Information about the Indicator -

Example strategy is shown above on how the indicator looks:

- It has over 90+ different trading strategies for different assets.
- Shows if the current viewing strategy is in a LONG/SHORT position.
- Shows the running percentage of profit for the currently viewing strategy.
- Shows if you could enter the said asset at the current market price.
- Shows when you could enter the next position and if it is should be a LONG/SHORT.
- Shows you the levels at which you can take profit for the viewing strategy.
- Shows you the level at which you must place a stop-loss for the viewing strategy.
- Shows you the stats for the currently running signal and how many take-profit levels it has crossed.
- Strategy data is updated every 5 minutes.

Earning Potential -

[Video: <https://vimeo.com/504052168>]

We decided to create a test account on Binance with a \$2000 deposit in early January 2021 and demonstrate to people how much one can earn using the indicator with a smaller balance to trade with. We invested about 15-25% of the deposit in each signal, with 20x leverage.

Deposit as of January 1, 2021: \$2000

Deposit as of January 18, 2021: \$9197

We managed to increase the deposit 4.5x times in 18 days, having received \$7197 of net profit!

Total Profit: \$9355 USD

Total Loss: \$2157 USD

Net Profit/Loss: \$7197 USD
Cumulative profit: +607%

SUSHI/USDT: +500% in 1 day (Futures - Crypto)
Spoiler [\(Click to View\)](#)

YFI/USDT: +530% in 3 day (Futures - Crypto)
Spoiler [\(Click to View\)](#)

WAVES/USDT: +350% in 3 day (Futures - Crypto)
Spoiler [\(Click to View\)](#)

Interesting Summary for the above three trades:
Spoiler [\(Click to View\)](#)

WAVES/USDT: +350% in 2 days
YFI/USDT: +530% in 3 days
SUSHI/USDT: +500% in 1 day

If you had invested \$1000 in each of these three signals as initial margin and kept a long position running for the next three consecutive days, then at the beginning of the fourth day you would have had over \$17,110 (!) in your trading account instead of your \$3000! These are just 3 strategies from the Crypto market shown as examples out of the +90 that comes packing with the indicator that includes strategies for Crypto / Forex / Stock! Just imagine how many possibilities this indicator offers!

WARNING: Please do note that leverage trading for crypto is considered very risky if you do not know what you are doing. This warning does not extend to Forex or Stocks as we also have strategies for Forex & Stocks besides Crypto and leverage trading for crypto is a completely different beast. Most people prefer trading crypto due to how easy it is to get into it and frequent trade setups are available in the crypto market. Lastly, trade setups like the three above won't be frequent - however, do expect 50-100% signals frequently every now and then. You'll be tutored to the best of your capabilities on how proper wallet management needs to be and as for the traders themselves, the indicator handles that part by informing you on how the trade setups should be for any selected asset out of the 90+ asset strategies available to you.

Pricing for the Indicator -

0.04312 BTC - 1 month (15% discounted)
0.09350 BTC - 3 months (36% discounted)
0.24650 BTC - 1 year (58% discounted)

As this is a partner product, we have limited control over the pricing structure for the indicator subscription.

However, as an added incentive for buying through us. You get a permanent 15% discounted rate every month.

The above price is after the 15% discount which is exclusive for buyers purchasing via RT.

Frequently Asked Questions -

Spoiler [\(Click to View\)](#)

Q: What is this Indicator?

A. This is a tool that you can use to generate good trading setups for Crypto / Forex / Stocks markets and profit immensely from the trading setups.

Q: Can a beginner use this?

A. This is a tool that is ideal for people who are familiar with trading already but if you are not familiar, we will include a crash course for free where we mentor how you'll need to use the indicator to benefit from it and maximize the earning potential for yourself.

Q: Any location restrictions?

A. Tradingview is accessible worldwide, hence the indicator will be as well. However, the assets you will trade will depend on which exchanges you have available to you for the respective markets. You may consult with us pre-purchase, so we can figure out where you could trade based on your location.

Q: Where do we use it?

A. This is activated in your Tradingview profile. Trades are executed on different exchanges depending on what you are trading.

Q: Can we use it for assets besides the one that is available with the indicator?

A. No, you cannot do that. However, we are constantly adding new strategies. Last month, 10+ new strategies were added.

Q: I'm very interested and wish to know more before purchase?

A. Add us, so we can add you to the server where we have a bigger, in-depth FAQ section and more details regarding this indicator.

Q: Is this a one-time purchase?

A. No, this is a monthly subscription-based service as the team is constantly improving it iteration after iteration.

Q: What are the requirements?

A. Money to trade, Exchange where you'll be trading, and a Tradingview profile.

Q: What are the deposit requirements?

A. Ideally, anything above \$1500-2000 for trading.

Q: Is this legal?

A. Trading is legal in the majority of the countries with the exception of crypto trading in select countries, please consult with local laws and us before purchasing.

Q: Are we open to using a Middleman?

A. We are open to using a middleman for the purchase. Our only condition is, we will need to be in a proper HF contract where it states explicitly that - the payment/funds will be released to us after the product has been activated on your Tradingview profile.

Those who are in our RT Vault service know that we had received signals for EGLD/USDT from multiple signal providers. But what's interesting is, that most providers entered super late into the pump. However, the clients with access to RT Indicator #1 had been LONG since the price was at \$14.01 and as of now, the price had peaked at \$23.27. So, in this particular future leverage trade, here is what you would have made:

The trade setup that began from 11th of December, 2020:

Spoiler ([Click to View](#))

With a \$1000 in the initial margin for this trade, you'd be up to +\$13,890 in massive profits (+1321% @20x leverage).

Trolls like you should be put in their right place ???

Honestly, your statement has got to be one of the most ridiculous ones I have heard in recent weeks. Firstly, since you went ahead and revealed the name. This means you should have the required brain cells to know that the price we were offering was at a 10% discounted rate than their original price. So, your BS claim of us selling it more expensive than the official one is making you look like an unprofessional troll with nothing better to do. And cementing your idiocracy is the fact, that you don't know that no one can steal a Tradingview indicator.

Either way, we are directly working with the Predictum team and providing an EXCLUSIVE rate for people who wish to purchase this.

A flat 12% discount for people who buy through us every month.

Back to how the indicator has been performing. Making +\$5,000 from a single BTC call is satisfying

on so many different levels. It's hard to even fathom it in words. People who are familiar with futures trading would know that feeling. P.S - The short-term BTC strategy had opened a LONG position at \$18,370 around 4 days ago. As of now, you may have noticed that BTC had breached the ATH and made a new record at \$22,000 & climbing.

The trade setup that began from 12th of December, 2020:

With a \$1000 in the initial margin for this trade, you'd be up to +\$6,700 in running profits (+640% @30x leverage).

Any sites you can leverage if you are based in the US? At this price point and for the capital I have, even with starting at 2k, that's pretty high risk to make back the 1k for just 1 month.

Well, depending on your location. You'd be somewhat limited, not sure if Binance US allows futures trading for people from the US. Otherwise, just by trading BTC futures, you can easily make 4-5x of your investment (Based on what Predictum says), and feedback from paying clients shows that they make 3-4x within a week or two. So, even though it is expensive - it is worth it just for the strategies and the features you get alongside it.

Now coming to some jolly news!!!

Finally, it's time to unveil one of the 2 most requested features for the Predictum indicator! We announce the launch of our Telegram bot! ?

This bot forwards alerts from our indicator on Tradingview to your Telegram account.

~ This bot will help you fully manage your alerts:

- Exclude signals from strategies with Accuracy below a certain value
- Exclude unnecessary coins/strategies
- Exclude certain exchanges
- Receive notifications for selected coins only
- Receive alerts for Crypto/Stocks/Forex only

Enjoy! ?

[Video: <https://vimeo.com/493743825>]

Check out the video. Everything is much easier now: you don't need to set up alerts and track the charts manually anymore – all information is in your Telegram. P.S this feature will be available for the clients within 1 week.

Get it from Resurgence Trading with a 12% discounted price.

Regards, Wolf.
Resurgence Trading.

? The much-anticipated v.2.1 update for the Indicator is finally here! Read What's new in v.2.1:

Spoiler ([Click to View](#))

New features:

1) We have released our Telegram bot!

This bot forwards alerts from our indicator on Tradingview to your Telegram account.

This bot will help you fully manage your alerts:

- Exclude signals from strategies with Accuracy below a certain value
- Exclude unnecessary coins/strategies
- Exclude certain exchanges
- Exclude strategies with bad dynamics
- Receive notifications for selected coins only
- Receive alerts for Crypto/Stocks/Forex only

2) We have enabled the alerts notifying that the price is approaching the entry point!

You will never miss a new signal anymore: the indicator will notify you in advance that you need to be ready to open a new position.

3) We added a parameter to measure the dynamics in the strategy accuracy.

For example, the indicator will record that the dynamics are falling if the accuracy was 85% for the 50 signals and then dropped to 70% for the last 15 signals, so it is better not to use this strategy.

New strategies:

ALGOUSDTPERP - Binance Futures | 3 min timeframe

SUSHIUSDTPERP - Binance Futures | 5 min timeframe

DEFIUSDTPERP - Binance Futures | v.2 | 15 min timeframe

Lastly, some of you sent us DMs in Discord asking if the Indicator got the recent dump of Bitcoin.

Well, see for yourself -

Spoiler ([Click to View](#))

The indicator went LONG on BTC on the 15th of December at \$19,432.

- Peak profit was at +580% when BTC made a new ATH at \$34,000.

The indicator went SHORT on BTC on the 4th of January at \$32,400.

- Peak profit so far is at +165% (Stay ahead in the game of making money)

So, all in all - the single indicator gets you 90+ different strategies unique to the pairs it is available on. And no, it just doesn't provide you with a buy this now, it provides you with an elaborate trade setup.

Entries, Stop-Losses, Take-profits, Current success rate, Next potential trade setup, past history for the trading strategy amongst multiple other things. With our recent features, you can just trade by following the Telegram bot. No need to look at Tradingview charts anymore.

A question that none of us can answer on why people aren't jumping into this. The one possible reason is, that unlike most of the things being sold in this forum - Ebooks & Methods which are priced very low, this is something which is expensive and not everyone can jump into this. Safe to say, we have received lots of interest and many would pick it up in the coming weeks.

No point in posting daily bad trades as it is rare, to begin with. Most of the strats have an accuracy of over 80-90% and one could filter out lower accuracy signal, so as to not enter low accuracy trades with bad dynamics. Hence, it is not worth it for us to post 'daily' bad trade updates. Thanks for your recommendations however and have a good day.

Morning mate.

Kinda interested in this but have no prior experience at all in trading.
Tried pumps&dumps with crypto but lost around 1k even using a bot.

Would love to talk more about this.

Have never ever been in the futures trading world but have lil exp w the crypto trading world.
Also got around 1k to invest other than the fees for this bot/indicator setup.

Please PM your discord so we can chat further.
Appreciate it.

Vouch for this indicator. It's great for trading crypto futures. Most coins have a 80%+ win rate and can earn you x0.5 your money each trade.

Good morning everyone,

One of our clients said that this Indicator can definitely see the future ?

Well, here is an example in response to what he said ??

Spoiler [\(Click to View\)](#)

#WAVES pump - The Indicator notified us that the price was approaching the entry point ?

We went long as early as 5 minutes before that.

As a result, fast +110% in 35 min - KACHING ?

I am following free signals in tele group and while they were accurate 5 out 5 so far, % profit they post is not accurate due to slippage, you dont get filled at the exact prices entry/sl/tp they give so you can gain a lot less even lose but they share screenshoot with +xx%. Not every trade but those "scalping" ones are risky af with leverage. I so wanted to join but high subs price combined with slippage is keeping me on the fence. ?

I see, thank you for sharing your experience with the free signals posted in their Telegram channel.

Well, not sure we agree about the profit % as it would vary depending on the leverage you decide to go with and the entry price you get in. Something you are not getting however is that actual subbed-members get prior alerts to trade setups in advance, which is the feature introduced alongside v2.1.1 and it basically prepares you to be ready to open a LONG or SHORT at 'x' price in advance.

As for the price, the Predictum team always sticks to the BTC price. With the exclusive partnership, we have going with them - 15% discounted price is the best we can do when it comes to bringing down the price. However, if you go for the longer sub-time, you get heavier discounts.

Someone asked us if the indicator got the massive #XRP pump that we had yesterday.

Well, why don't you see it for yourself?

Spoiler ([Click to View](#))

#XRP - We were LONG since the morning of 29th, long before the actual pump even started.

#XRP was on steroids yesterday ?

We are up +1670% in 3 days and +766% since we posted in our public TG channel.

The indicator had opened Long on #XRPUSDT 3 days ago at \$0.27 and still longing ?

Even a position of \$300 invested in this signal would have magically turned into \$5,300 in profits ?

So, what are you waiting for? Join us and start getting more profitable trades using our indicator.

Yes, this is expensive depending on whom you are asking.

Expensive for your average day to day people? Maybe.

Expensive for serious professional traders or people who are actively trading? No.

But compared to the price you are paying and what you can be making in return, the product speaks for itself, and we have over 100+ reviews for it in our public channel. This is a tool that traders use to get some HQ trade setups with high accuracy for its signals. And it is not just your run-in-the-mill indicator either, it has unique asset strategies for over 90+ assets which makes it a completely unique product that you won't find anywhere else. This is not some cheap knock-off e-book or so-called magical method that promises you riches that are not based on reality. It involves a tool that greatly enhances your skill (trading). This is a tool used by professionals & amateurs alike and something which has been implied so that your normal day-to-day people can also use it with the introduction of the Telegram bot for it.

Thanks you

For newbies, you get mentoring & hand-holding via us. Even though the Predictum team doesn't provide that, Resurgence Trading will be giving you the full crash course on how to trade futures and how to get acquainted with it for free as we love teaching. One other thing you can do is, try trading futures with our RT Vault service's signals and once you get familiar with it, move on to the indicator.

That would be our suggestion but yea, feel free to send us a PM or add us on Discord:
EnlilWolf#3500

We can decide & discuss how to proceed further with it.

Not everyone paid for 1 month, some paid for 1 month and then upgraded for longer months. Some started with longer months, it's different with everyone and it's hard to give you the total amount. As for advertising, we have marketers who handle it for us - we decided to extend into forums starting with HF first.

Q. Why are they so expensive when its based on trust?

A. Besides the usual response that we usually give which is, "Because it works as advertised" and also because of feedbacks from paying clients who give reviews like the one posted below. Of course, not everyone can afford it because it is a costlier tool to have but for people who are trading with a serious pedigree, it's a small price to pay.

Spoiler [\(Click to View\)](#)

Besides that, we do understand that it is more on the steep/expensive side of pricing but it is something we have no control over. It rests fully with the Predictum team and they stick with the (BTC) equivalent for payments instead of (USDT). We did try to convince them otherwise but they haven't decided otherwise so far. Maybe in the future, we will keep trying to pester them to lower it.

For now, providing the discounts that we are providing is the best we have been able to do ?

Regards,
Resurgence Trading.

Greetings & Welcome to Hack Forums firstly.

~ Make sure that you take the time to read the help documents to familiarize yourself with the rules of the forum.

Now coming back to the question that you had asked. Yes, you are missing by far the biggest factor in the whole calculation and that would mean, the graph that you see is for 'XRPUSDT' and not 'XRPBTC' which means we were trading the 'Futures market' and not the 'Spot market'. Now if you aren't familiar with the 'Futures market', the benefit of trading futures is the capacity to use leverage in these trades. So, the gains in % that you saw in the chart were with the leverage of 10x which is the default leverage one uses while trading futures, it can go as high as 50x and for XRPUSDT, you can go as high as 75x.

To make it clearer, let me highlight a situation from that time:

So, by risking \$27.00 USDT in initial margin and entering this trade at \$0.27 for the XRP trade. By the time the XRP price peaked at \$0.73, our unrealized profits would have been \$460.00 USDT which as you can see in the screenshot is an ROE of 1703.70% roughly at 10x leverage. So, that is the crucial part you were missing when you were observing the charts. Hope this part makes it clearer for you.

Regards.

Hey everyone,

It has been a while since the last update. So, here's an update. We recently got lots of DMs asking us if the indicator managed to catch both the huge dumps we have had this week. Taking into liquidations for both the dumps, it is well over \$14 Billion dollars wiped off the market. So, during that time - how did we do? Did we find success or did we fail miserably?

Spoiler [\(Click to View\)](#)

Result: Of course, it did! It couldn't be in any other way. The indicator went Short a week ago at \$60,100 ?

So far, the Peak Profits: +264%. Perfect entry = easy money for traders ?

So, what are you waiting for?

It does kind of resembles it but both do different things. Unlike the Williams Fractal, each of the strategies used for the individual assets is varied and differentiated. So, it is not just 1 strategy for all assets. It varies between timeframes and assets.

Thank you for your opinion. However, as per our expertise, a trial of 6-12 hours isn't sufficient to judge a complex indicator such as this one. The success with this indicator varies from person to person and for every person that doesn't find it helpful, we have five others who have profited from this immensely. And as per our own individual foray into the indicator as we are working to automate it fully, we do believe that it is an extremely useful indicator that has a huge potential for gains if someone follows our tips & guideline manual accordingly.

Either way, thank you for sharing your feedback. As we like to maintain full transparency, it is our duty to inform both sides of a coin. Having a biased one-sided opinion will only benefit a client so far. You have shared yours, and we have shared our side.

Regards.

Earning Potential -

[Video: <https://vimeo.com/504052168>]

We decided to create a test account on Binance with a \$2000 deposit in early January 2021 and demonstrate to people how much one can earn using the indicator with a smaller balance to trade with. We invested about 15-25% of the deposit in each signal, with 20x leverage.

Deposit as of January 1, 2021: \$2000

Deposit as of January 18, 2021: \$9197

We managed to increase the deposit 4.5x times in 18 days, having received \$7197 of net profit!

Total Profit: \$9355 USD

Total Loss: \$2157 USD

Net Profit/Loss: \$7197 USD

Cumulative profit: +607%

SUSHI/USDT: +500% in 1 day (Futures - Crypto)

Spoiler ([Click to View](#))

YFI/USDT: +530% in 3 day (Futures - Crypto)

Spoiler ([Click to View](#))

WAVES/USDT: +350% in 3 day (Futures - Crypto)

Spoiler ([Click to View](#))

Interesting Summary for the above three trades:

Spoiler ([Click to View](#))

WAVES/USDT: +350% in 2 days

YFI/USDT: +530% in 3 days
SUSHI/USDT: +500% in 1 day

If you had invested \$1000 in each of these three signals as initial margin and kept a long position running for the next three consecutive days, then at the beginning of the fourth day you would have had over \$17,110 (!) in your trading account instead of your \$3000! These are just 3 strategies from the Crypto market shown as examples out of the +90 that comes packing with the indicator that includes strategies for Crypto / Forex / Stock! Just imagine how many possibilities this indicator offers!

WARNING: Please do note that leverage trading for crypto is considered very risky if you do not know what you are doing. This warning does not extend to Forex or Stocks as we also have strategies for Forex & Stocks besides Crypto and leverage trading for crypto is a completely different beast. Most people prefer trading crypto due to how easy it is to get into it and frequent trade setups are available in the crypto market. Lastly, trade setups like the three above won't be frequent - however, do expect 50-100% signals frequently every now and then. You'll be tutored to the best of our capabilities on how proper wallet management needs to be and as for the trades itself, the indicator handles that part by informing you on how the trade setups should be for any selected asset out of the 90+ asset strategies available to you.

Pricing for the Indicator -

0.04312 BTC - 1 month (15% discounted)
0.09350 BTC - 3 months (36% discounted)
0.24650 BTC - 1 year (58% discounted)

As this is a partner product, we have limited control over the pricing structure for the indicator subscription.

However, as an added incentive for buying through us. You get a permanent 15% discounted rate every month.

The above price is after the 15% discount which is exclusive for buyers purchasing via RT.

Frequently Asked Questions -

Spoiler [\(Click to View\)](#)

Q: What is this Indicator?

A. This is a tool that you can use to generate good trading setups for Crypto / Forex / Stocks markets and profit immensely from the trading setups.

Q: Can a beginner use this?

A. This is a tool that is ideal for people who are familiar with trading already but if you are not familiar, we will include a crash course for free where we mentor how you'll need to use the indicator to benefit from it and maximize the earning potential for yourself.

Q: Any location restrictions?

A. Tradingview is accessible worldwide, hence the indicator will be as well. The assets you will trade however will depend on which exchanges you have available to you for the respective markets. You may consult with us pre-purchase, so we can figure out where you could trade based on your location.

Q: Where do we use it?

A. This is activated in your Tradingview profile. Trades are executed on different exchanges depending on what you are trading.

Q: Can we use it for assets besides the one that is available with the indicator?

A. No, you cannot do that. However, we are constantly adding new strategies. Last month, 10+ new strategies were added.

Q: I'm very interested and wish to know more before purchase?

A. Add me, so we can add you to the server where we have a bigger, in-depth FAQ section and more details regarding this indicator.

Q: Is this a one-time purchase?

A. No, this is a monthly subscription-based service as the team is constantly improving it iteration after iteration.

Q: What are the requirements?

A. Money to trade, Exchange where you'll be trading, and a Tradingview profile.

Q: What are the deposit requirements?

A. Ideally, anything above \$1500-2000 for trading.

Q: Is this legal?

A. Trading is legal in the majority of the countries with the exception of crypto trading in select countries, please consult with local laws and us before purchasing.

Q: Are we open to using a Middleman?

A. We are open to using a middleman for the purchase. Our only condition is, we will need to be in a proper HF contract where it states explicitly that - the payment/funds will be released to us after

the product has been activated on your Tradingview profile.

would you be accepting paypal?

JuiceBoxCereal - June 14, 2021, 10:33 pm

Any news on automation? Also would rather pay with credit card. It's just much easier and you have the ability to use your crypto towards the investments, rather than taking away from them to pay for the subscription. Just a thought.

(Jun 6, 2021 11:09 AM)• **Enlil Wolf** • Wrote: [\[CITE\]](#) Thank you for your opinion. However, as per our expertise, a trial of 6-12 hours isn't sufficient to judge a complex indicator such as this one. The success with this indicator varies from person to person and for every person that doesn't find it helpful, we have five others who have profited from this immensely. And as per our own individual foray into the indicator as we are working to automate it fully, we do believe that it is an extremely useful indicator that has a huge potential for gains if someone follows our tips & guideline manual accordingly.

Either way, thank you for sharing your feedback. As we like to maintain full transparency, it is our duty to inform both sides of a coin. Having a biased one-sided opinion will only benefit a client so far. You have shared yours, and we have shared our side.

Regards.

What's the point of offering a 6-12 hour trial then say that it's not sufficient to judge the indicator in this timeframe?

Also your OP says 'Click to edit'.

Excellent question, thank you for asking.

We do offer an extended trial period of 24-36 hours if some additional questions are resolved by the interested client and it is offered to them when each of the clients reaches out to us with the interest of getting a trial. Now, coming to your question: The reason for providing a trial is simple if we don't provide a trial - people will say: "Who will pay such a price for something which we can't test, We don't even know if it is real". Not to be shocked, but we have seen people raise these types of questions in the past before. So, to avoid that - we provide them to check the thing is indeed real and best of all, during that time period, whether or not they get the chance to enter new signals, they can evaluate how previous signals performed, how much their accuracy was. What type of trade setups to expect. That is the sole purpose of the trial.

However, we do get people who try to evaluate the indicator within a span of 24 hours. Now, that's purely impossible. Hence, we let everyone know that the time period is not enough to evaluate something based on new signals/trade-setups. But it is sufficient time, for someone to check and evaluate how it performed recently with all assets.

As for the 'Click to edit' - Hack Forums is having a bug.

I'm curious, how does this compare to an indicator like LuxAlgo?

• Enlil Wolf • - June 29, 2021, 8:44 am

(Jun 26, 2021 03:49 PM)BoilMakers Wrote: [\[CITE\]](#) I'm curious, how does this compare to an indicator like LuxAlgo?

Quite vastly, because Lux Algo is ideal for traders who are more than proficient at chart analysis and is able to decipher what they are looking at without needing external help. It is definitely not geared towards someone who is a beginner in trading.

Not to mention, the RT indicator is also not geared towards someone who has 0% knowledge about trading and is expecting to rake in 5-6 figures just by following the trade setups. Both indicators are somewhat similar but vastly different if we get down to the intricacies of it. As for Lux, you may run it on any pairs as for ours, it works on the pairs for whom the internal strategies have been made. It's not a 1 strategy for all pairs like Lux, it's individually modified for each asset.

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
