Hi all,

Used to be active here from time to time for the last 6 years. I was surprised to read how HF now recommends you to create a new account once you are locked out of your old one. There used to be a very strict one account policy. Anyhow, since I'm locked out of my old one, I still got just one functioning account ;)

A little bit more about myself: I write code, mostly C++. For scripting I use Python. I've worked as a pentester but did not really enjoy the corporate environment.

I build a native RAT in C++ a while ago, it can do the following basic things: Send CMD commands

Inject DLL's into processes (or self) (reflective)

Bypass UAC by exploiting cmstp.exe

Take screenshots

Steal files

Just for fun and educational value ofcourse.

Hope to enjoy my stay, feel free to contact me if you need someone to look at your code.

Welcome back. Yes I would say it is business as usual & you are not breaking the rules by making that account.

2xTheTap115 - December 12, 2020, 9:57 am

Hi buddy?

Nice to see you coming back to HF, I think you will find a lot of things in the Code section?

Take care and see you on the forum??

P.S I am not a programming guru myself but it's nice that you are proficient at it

Who knows, maybe I will need your help in the future:)

All the best to you?

Dopamine - December 12, 2020, 10:02 am

Welcome back here

Congrats on your upgrade.

Welcome back to hackforums.

ColdCypher - December 23, 2020, 4:54 pm

Welcome back to HF. Hope to hear more about your work in the future!
