Was wondering would the GIGABYTE Radeon RX 580 GAMING 8G be compatible with my Pavilion PC pre-build. It has an 8433 motherboard, I've already ordered it but I would appreciate some assistance with the matter.

GPU:

If it has a PCI slot, then yes. The real question is, how many watts is your PSU?

Haaks - December 16, 2020, 5:55 am

Hello. I had a hp 6300 pro with a gtx 960 2 gb videocard. And it worked great you just need to see if your psu can handle it. If you sent me a pm with your pc specs i could take a look.
