Thread: [Routing Linking, idk where i mess up](#)

de_g3ntl3m4n - December 15, 2020, 2:43 am

Please just look at this ->

<https://codesandbox.io/s/misty-sound-gvpcs?fontsize=14&hiddenavigation=1&theme=dark>

Basically, whenever I try changing the URL my page doesn't load, trying to make it load like a single page application with react-router-dom

I am literally doing the same things I other YouTubers do and still when I do it, it just doesn't want to work.

Can someone just please let me know what is wrong. I tried doing the Route in one line and then putting the component between Code `<Route></Route>`

And nothing... I still get that one page to show up even though the URL is different, at this point I'm just losing my mind, when I copy someone else's code it works, but when I type it up myself.... it doesn't work... what the f is life.

If you tell me there is a typo with something I will cry, been at this for like 2 hours...

im fucking dead.. just look at my code and realized in my route I put to instead of path.. i am going to go cry now, sorry for wasting your time
