Thread: [How to open Excel file protected by password](#)

Baf75 - December 18, 2020, 8:18 am

Hello everyone,

I have an old Excel file (but later than 2013) which is protected by password for opening. Is there anyway to bypass or get access to its content?

For protected sheets or VBA projects, I know already, but I don't know how when password is required to open the file.

Your help will be appreciated.

Upload the file and post in the [Hash Bounties](#) section.

Thanks for response, but it is a personal file I can't share it. I understood that what needs to be shared is the hash key but how to get it ?
