Have any of you heard about the graph GRT token

Was listed on binance and coinbase pro same day (17th december) 2 days later the 24h volume is 2.5b +

And it went up from \$0.12 to \$0.58

I got in at \$0.13 still holding

Where do you see GRT going with the price in a few days? It keeps increasing.

Now at \$0.77

Im still holding

I keep shorting it. Almost got liquidated last time. Managed to pull out with some profit.

This will stop sometime, and it's taking a large hit.

Got in at .20c and I thought it was done at 50c and again at .65c but its still going up. Im going to hold for a few more days and then see where its at. I hope it will hit \$1 or more.
