Thread: [Python Flask | Machine Learning with Coronavirus Prediction](#)

ArviX - December 21, 2020, 5:23 am

Hello, I developed a simple website with flask. With machine learning, there is an estimate of the number of coronavirus cases and deaths for the next 1 week. In the information section, there is real data from the API and there is a simple blog.

Demo:

<http://coronaprediction.pythonanywhere.com/>

Source Code:

<https://github.com/ysfcndgr/Python-Flask-Corona-Machine-Learning>

The places where I use api do not work in the demo because the hosting package I use is limited. But it will work if you use it in your local network.

Nice project, maybe add some more country's in but other than that it's cool, I guess the predictions are made from previous official data?

I will add over time. Yes, predictions are made with official data released. Thanks :)
