Thread: [Instagram follow/like bot](#)

K???er - December 23, 2020, 8:25 am

Are there any decent Instagram bots out there nowadays? I remember using MassPlanner and FollowLiker, but they aren't available anymore.

Peppermint Butler - December 23, 2020, 11:07 am

Last time I checked Instagram has heavily shut down all automation capabilities on their platform. I'm currently looking at top comment software for Instagram as a viable alternative to follow/unfollow or mass liking.

Thanks, that might be something I should look into.

Did you find any good tool for it yet?

I am presently using Mobile Automation for all of my Clients,It automates the Mobile UI with Appium and a Front Panel on my Web.

Let me know if anyone's Interested and I have the Infrastructure to manage 100s of Accounts without any blocks,Not willing to sell the Bot but can show the proofs required to actually prove what I say:)

Still need an Instagram bot...

Sugawara - March 30, 2021, 4:53 am

The bots which were using private APIs are going down easily. I've seen a lot of them switching to browser-based bots that are coded in NodeJS.
