I had the time to try out this style, so here's something I did.

This style is quite tough to execute. Is it possible to implement this? Yes, it is, as I have seen live examples of this style.

Definitely, when I have the spare time, I'll develop a live version out of this design.

It looks really nice NGL, but I think people will end up asking you for night mode because of how bright it is.

You're right! and thanks.

Will make a dark mode version.
