Thread: [String & file encryption for Python developers](#)

PELock - January 2, 2021, 6:16 pm

Turn your plain text Python strings into an encrypted polymorphic mess with a new StringEncrypt module for Python 3

<https://pypi.org/project/stringencrypt/1.0.0/>

? Sources:

<https://github.com/PELock/StringEncrypt-Python>

? Free usage code (use it while it lasts):

D9DB-7CDD-ED1E-0EAC

? Before and after ? After encryption:

tsuki - January 2, 2021, 6:32 pm

I'd imagine if someone cared about security, they wouldn't code their program in Python in the first place.

PELock - January 3, 2021, 6:14 am

According to TIOBE index, Python is 3rd most popular programming language in the World!

<https://www.tiobe.com/tiobe-index/>

Many IT security developers (pentesters, hackers, redteamers, malware researchers) uses Python on a regular basis.

Get over it.

I feel like this is a bit repugnant. I see this being said with a lot of languages and I don't agree especially with Python being so widely used. A little protection can go a long way.

Update

v1.7

Fixed connection problem to the licensing server

Software binaries and installers are no longer digitally signed, it doesn't provide any value to the software and has no other function than drain money out of my pocket year by year by the greedy code signing certification companies

Online interface

<https://www.stringencrypt.com/>

Desktop client

<https://www.stringencrypt.com/download/>

Visual Studio Code extension

<https://www.stringencrypt.com/extension-for-visual-studio-code/>

soooo trueeee

PELock - January 26, 2025, 4:29 pm

You should talk to Dropbox and tell them how bad of a company they are doing their software in Python :D
