Thread: [Browser passwords to Gmail \[Rubber Ducky or Standard USB\]](#)

seeber - January 3, 2021, 5:32 am

Hello!

NOTE: This is a physical access attack.

I've developed a script that collects all saved browser passwords from a machine and sends them to your Gmail.

It's reliable, fast, fully customizable and secure.

Features: Doesn't touch Windows Defender. It simply makes an exception for the file I've provided (which saves a lot of time)

Fast and reliable

Fully customizable

Can be modified to send the collected passwords to a server via FTP.

Automatically deletes all downloaded files and wipes all traces

Locks the screen so it appears as the screen timed out.

If you're using the Rubber Ducky: You do not need Twin Duck! Everything will be downloaded from the web.

All you have to do is place the inject.bin file on your Ducky.

That's it! Wait for the magic to happen.

If you're using a normal USB: Place all the files I've provided on a USB Drive.

Run the start.bat file

You're done!

DM me for the price. It's cheap considering what you're getting. Only accepting BTC.

Kind regards.

pisicei - January 3, 2021, 6:23 am

prof of evidence :))

show a movie something

Sure!

On a Rubber Ducky or normal USB?

pisicei - January 3, 2021, 8:56 pm

do normal USB, Rubber Ducky i don't think many people use

There ya go: [Vimeo](#)

If you have any more questions I'm here to answer.

annavee - January 4, 2021, 5:34 am

No video to show man. Are you sure you are serious about your claims?

Updated video link: [Vimeo](#)

Idk why they delete the last one. My bad.

guardian - January 4, 2021, 6:51 am

I don't think his claims are false, it's definitely not too hard to code something like this. The USB has to be inserted manually and a BAT script has to be executed, which can then perform the actions required. The only thing I don't understand is why you market this as some kind of tool that has to be used with a USB? I mean it is literally the same thing, as putting a .exe file on your USB and executing it.

Or am I missing something? Anyways, not trying to sales thrash, the product seems valid and might be useful to some that prefer using a batch script over an executable.

its little different, but yes the same lol. Its most likely dropping a exe cause a .bat will not does this. Its most likely dropping the exe that grabs the passwords and shooting them over to email. Thats why he is doing a WD execption. I have the same file on my bashbunny, it drops the exe gets the passwords and self deletes with all logs cleared. You can find this exact script on hak5 forums. Dont know why you are trying to sell it.....not you bear op

also sorry if it looks like im shit posting didnt mean that, but i mean make a dollar when ever possible

If you find me the exact script off Hak5's forum I'll pay you \$500. All the scripts I've seen are either 3 years old and aren't supported anymore or just don't work. And I'm not using any types of exe 's. It's mostly done with powershell. cheers.

Elijah - January 5, 2021, 10:21 am

it sounds like any other keylogger found here with password recovery.
Whats so special about it?

dsjuagfdtasfgdyu - January 5, 2021, 12:32 pm

brzmi jak kazdy inny keylogger znaleziony tutaj z odzyskiwaniem hasla.
Co w tym takiego specjalnego?

binex4kool - February 3, 2021, 2:44 pm

Please can i get the wifi sniffer?

DarzTheGod - February 3, 2021, 5:31 pm

I have someone's chrome Login Data file is there anything I can use to get the passwords out of it?
