Thread: [Does anyone know usbq or a way to simulate a a signal to a game](#)

pepmyangus - January 3, 2021, 12:10 pm

Hey guys, so I ride a real bike indoors that's attached to a machine that calculates how much power you're exerting. There's a game called ZWIFT that allows you to ride with others. You get certain items if you ride for certain distances. I am looking for someone to create a fake signal or simulator so that the app thinks I'm riding the bike. This way I can get the items without having to ride.

If you search Zwift Cheating using USB Hacks on youtube youll see an example.

Paying good money for this let me know.
