Thread: [\[PHP\] I need a php file that creates another php/text file \[HELP\]](#)

SLAPYA - August 15, 2010, 10:41 am

Hey guys. I am needing to create a textfile that creates these things:

- a php file with code in it
- a text file with text in it

can someone please help me with this.

SLAPYA - August 15, 2010, 11:15 am

hey...thank you for the answer for the php question. One more thing that I need to know tho that u may be able to answer is this...

When i create the file, I am going to need a different name and text each time.

I used this code to write different text to a file each time:

```
<?php
$myFile = "http://a1own.com/Ulalonnection.txt";
$fh = fopen($myFile, 'w') or die("can't open file");
$stringData = str_replace('%newline%', "\n", $_GET['val']);
fwrite($fh, $stringData);
fclose($fh);
?>
```

this way...whenever i went here:

[http://a1own.com/filewriter.php?val="textToWriteHERE"](http://a1own.com/filewriter.php?val=)

i was able to write that text to the file. This made it dynamic.

How would i make the file created and text in the file dynamic?

ok...so i did this

```
<?php
$pathfile= $_GET['val'];
$text="Hello world";
$fp = fopen($pathfile, "a+");
fwrite($fp, "$text\r\n");
fclose($fp);
?>
```

and when i went here: <http://a1k.com/filecreator.php?val=filetocreate.txt>

it worked and i was able to create dynamically named files. But now I want to also be able to change the text that is written in them. I tried using the same method and then simply doing...

<http://a1k.com/filecreator.php?val=filetocreate.txt?val2=textthere>

but that didn't work, does anyone know how i would do this

ndee - August 15, 2010, 12:58 pm

Link: <http://a1k.com/filecreator.php?val=filetocreate.txt&val2=textthere>

Code: PHP Code

```
<?php
$pathfile= $_GET['val'];
$text = $_GET['val2'];
$fp = fopen($pathfile, "a+");
fwrite($fp, "$text\r\n");
fclose($fp);
?>
```

thx bro...ill test it now. I think thats all i was looking for. A simple & sign between them lol

redpenguin - August 16, 2010, 9:44 am

+ don't forget to chmod to 777?

RadarX - August 16, 2010, 12:04 pm

Wouterkruze is right, if you don't set the chmod permissions to 777 you won't be able to write the text file.
