Thread: [Getting a meterpreter on an android device](#)

HardStoN - January 8, 2021, 1:59 pm

Is it possible to get a meterpreter shell on someones android and get access to the camera by an image or something?

Because apk is kinda suspicious.

I don't know of any way to do this. You would need some kind of exploit. In the end, it's all about how creative you are and how you present it.

Instead of creating a meterpreter session on android, it is better to run RAT in conjunction with a phishing or social engineering attack. In some cases, it is worth checking if a given device does not share its ADB on a remote port (provided that you know its IP). It makes it so much easier, I know from experience.

Yeah i used to play around with adb ports from shodan, but my question is that i know camera cannot be opened by a thirdparty app that runs in the background.

So i guess my question is if something like that is possible? Maybe kernel driver?

Wait, are you saying that you can't intercept cameras with the rat application? I guess you should read this

[nullbyte](#)

This is just a simple example

I know that android made something that block camera usage of background APK's

And out of curiosity is it possible to install a R.A.T on and IOS device and use its camera too?

Because as far as i know apple has some strict stuff about the phone's privacy
