How long have these been around? Did you make them or are you reselling?

Textures for EFT have been around since the game first came out. My buddy and I made them yes. Our product was a private cheat just we used for a few months, and then we started selling publicly. Again our cheat is ONLY modifying textures you already have. We require 0 injections. If you have any other questions don't hesitate to ask!

Can this be patched? Can I use it on my main or should I buy a smurf?

So obviously no exploit is totally safe however this is one of the safer options it could be patched if BSG pays Battle Eye more money to verify file colorings etc. which I don't foresee them doing until full launch if ever. I've been using it on my main, no injections just simply changing texture files you already have for EFT so I would say it's as safe as you can get but obviously nothing is totally safe.

If you want your main to be safe, it's mostly recommended to use it on a smurf.

Coz there's always a risk of getting banned while using things or do things which aren't allowed.

PS. GLWS seems promising. Is it the same like the pak things which were available for PUBG or it's something else?

I'm not sure what exactly you're referring to with the PUBG pack thing, feel free to DM me on HF or discord I can clarify!

Ahh yea i can remember PUBG had .pak files and you could edit them. The result were also no grass and stuff, thought maybe it was the same thing. It's probably something else, anyway glws ?

Driz - January 9, 2021, 4:31 am
