Thread: [Unpacking and repacking exe](#)

JuVe - January 12, 2021, 10:23 pm

Hi guys,

Is it possible to unpack an exe, edit the source and repack it?

Basically the exe has a 7 day trial function on it to then it ceases working and I want to remove it or add X days to it so I can use it forever.

It was made using pyinstaller.

Thanks!

Most likely it is. You could as well get just the functions you need from it and use them as a script.

So I've figured out how to unpack and decompile the exe thanks to the abundance of tutorials out there however there's little information on how to repack it or make a new exe after editing the source file...

That should help you - <https://www.pyinstaller.org/>

Packaging a Python app usually isn't that hard but there are some tricky stuff there too. Lots of tutorials on the internet tho.

Aware of pyinstaller too.. however its not a simple process repackaging an exe you extracted that has a lot of files & dependencies and you've only decompiled the source file. Not really much information in that regard available ?
