Thread: [\[FREE\] pen-testing tools](#)

Z4ACK - January 14, 2021, 7:33 am

Heyo, decided to post two pen-testing tools, or rather show ya'll some tools that are very useful:)

cobalt strike extension kit:

[https://anonfiles\[WARNING POSSIBLY INFECTED\].com/v6Odpa99p8/cobalt_strike_extension_kit-master_zip](https://anonfiles[WARNING POSSIBLY INFECTED].com/v6Odpa99p8/cobalt_strike_extension_kit-master_zip)

keepnote with a lot of information:

[https://anonfiles\[WARNING POSSIBLY INFECTED\].com/n7kdv994p5/keepnote-master_zip](https://anonfiles[WARNING POSSIBLY INFECTED].com/n7kdv994p5/keepnote-master_zip)

MythicalPro - January 30, 2021, 5:18 pm

anonfiles[WARNING POSSIBLY INFECTED] is one of the worst websites it tries to install malicious extensions etc. Don't try to download these.

Why would you need the anonfiles[WARNING POSSIBLY INFECTED] links when it's right on his GitHub page? ?

Dolla\$ - April 17, 2021, 5:30 pm

Malware in the Zip, be aware.

@Admin

@Admin

To be honest that wouldnt be a deal breaker for me. I would be surprised if an unencrypted version of Cobalt Strike existed, that didnt flag AV's.

Having said that, the Signatures that this ZIP is labelled as, are different to those that Cobalt Strike would mention.

AKA; This is not Cobalt Strike.

AKA; This is not Cobalt Strike.To add on that, a lot of legit tools are going to be flagged. Metasploit for example is one.

That's called false positive, but it's not the case here. Why would the user upload a free to use open source tools over anonfiles[WARNING POSSIBLY INFECTED] :))

idfix5689 - May 3, 2021, 5:32 am

even I don't do a scan to see it's infected I will never dl things like that...

like it was said before, why someone upload these files on anonfiles[WARNING POSSIBLY INFECTED] even we can have it on github or directly on their sites.... and with a big FREE in the title for sure...?

ok there is many false positive when we do a scan but this time I really don't think it's the case....^^
??

Dotexe - May 3, 2021, 12:13 pm

This is not 2006 anymore, if it's something open-source publish it on github and not any other platform. I wouldn't even bother checking it up on a VM but still use it at your own risk!

Z4ACK - June 2, 2021, 12:56 pm

Btw, I sent the tools that were already on the github for easier access. I'm sure the checksums are identical as the one that were on the github. If they weren't, I would know why. The files were downloaded directly from the github.
