Which modded controllers are the best? For Xbox One X.

Like for quicker aiming, reload faster, and make a semi auto into full auto. For Call of Duty

I heard Evil Controllers are good.

Do these controllers work for the PC as well?

I'm not sure. I just googled

And was wondering if anyone has used them.

Evil controllers are good, but pricey

They are really reputable though, they've been out since like Halo, and the first couple of Cods

You can prob also find a used one on ebay or whatver

Thanks man.

Just one more question

What's the best gaming website? For reviews on new games, systems, controllers, etc...

I recommend going for an attachment if this is what you're looking for specifically. You should look into either Titan 2 or a Strikepack controller attachment. The Titan 2 is my favorite, personally.
