Thread: [add gradient to form / remove blackbox when clicking off buttons](#)

going clear - January 16, 2021, 10:22 am

Hi, I'm re-designing an application (just re-creating the forms in visual studio), and having a few issues.

The main one is, I need to put a gradient over the application, that goes over the images/buttons on the form, and also the background. I looked at some solutions online but they fully changed the form to a colour gradient, over the top of all images and buttons which disappeared.

I also need help fixing the buttons, as when I click off them, a black box appears around it despite me setting the border to 0.

Images:

<https://imgur.com/a/n4Mcp4j> - button issues

<https://imgur.com/a/2zHacP1> - gradient I'd like (goes from #6619ff to #00bfff)

I'm happy to give a tip via ETH to anyone that helps me fix this.

To get rid of the Border around the Button you gotta render the Button Smaller

Code c#

```
Button1.Region = new Region(new Rectangle(3, 3, Button1.Width - 6, Button1.Height - 6));
```

Code VB

```
Button1.Region = New Region(New Rectangle(3, 3, Button1.Width - 6, Button1.Height - 6))
```

Not sure about the gradient issue and im too tired to look into it gl tho
