Thread: [How to get the book file from any website that doesn't want you to get the book file?](#)

Yawnxer - January 22, 2021, 4:54 am

Hello there!

Since the title is pretty vague I'm going to try and explain it as much as possible so please bare with me .-.

I was wondering how I could extract the book file that a website uses to present a book on my webpage using some sort of method or plugin that would allow me to get the book file.

So basically if I read a book on an online website (and payed for it) and wanted to save it and share it with others, how could I do this without sharing...well..my account.

I thought of making a python code that would automatically take each page and convert them to a picture or something that would store that page and put them all together as a .pdf or .epub, though I have no idea how I could do this.

So if any of the two solutions are possible, I would love to hear your thoughts.

Thanks!

Can't you download it if you paid for it?

Some websites just dont want you to download it. You pay for it but they don't give you the file. Yes, I know, how annoying.

Well you could find a site that allows downloads. But if you want to get this without paying then you need some high-level hacking.

So you can read the book in your browser, but nothing else? How about using a js library to convert the page to a pdf and saving that locally? You can obviously copy the code/library in the developer console
