#ETH/USDT

Bull Market Continues! We will re-visit the upper levels of \$1440 in the short-mid term. We are currently suffering from the sudden \$100 billion Bitcoin Sell-off. Hold tight! ?

[vatopid=30]

Buy: 1200-1300

Stop-Loss: 1150 (4-11%)

Target 1: 1500 ?

Target 2: 1700 ?

Target 3: 1900

popZmoke - January 22, 2021, 5:58 am

I've got all my orders below 1100, we'll see if they get filled

Voxi - January 22, 2021, 6:19 am

My target is 1.6-1.8k, so I think I'll sell at 1.7k

I'd take out 50% out T2 and rest at T3 when it hits. And buy back again in a dip

Mortician - January 22, 2021, 7:05 am

I took out all my profits and after yesterdays dip I opened a new long position in the green at the moment but things are pretty volatile

.Infinity. - January 22, 2021, 7:07 am

I'm a medium-long term holder. I don't like selling, I just buy more at the dips.

Ethereum has re-corrected back to the support levels seen on the 15th - 16th of January. Last 24

hours don't worry me.

Mewtwo - January 22, 2021, 10:39 am

It'll be nice if it hits 1500, I've been waiting for that mark to sell :/

Varane - January 22, 2021, 11:17 am

Accumulated as much ETH as I could and now I patiently wait for 2k.

Same, been getting as much ETH as I can these past weeks. It's a safe bet, we are going much higher than anticipated.

Feeling very bullish on ETH!

He's probably got great ideas. Like partnering with African governments to make huge gains!

I'd recommend his trading services

Aww you poor baby, I thought you gave up after you stopped responding to me when I proved your understanding of general metrics is somewhat insufficient?
