Thread: [Can i make CSRF in this code?](#)

cyberpunk3077 - January 27, 2021, 5:24 am

```
Code <div class="layer brf3 pding10" style="">
  <form method="post" action="/myaccount/settings/email/" class=" default settings"
id="changeemailForm" novalidate="novalidate">
  <fieldset>
    <legend></legend>
    <div class="fblock clr">
      <div class="label marginbott5">
        <label class="fbold c000">NEW EMAIL</label>
      </div>
      <div class="area clr">
        <div class="focusbox smallshadow fleft">
          <input id="changeEmailEmail" name="changeemail[email]" class="text medium long
light br4" value="" type="text"> <span class="status icon vmiddle dnone">&nbsp;</span>
          <p class="desc">
            <small></small>
          </p>
        </div>
      </div>
    </div>
    <div class="fblock fblock--submit">
      <p>
        <span class="button br3 large"><input value="?????" id="mailSubmit" class="cfff"
type="submit"></span>
      </p>
    </div>
  </fieldset>
</form> Noobody? guys
.
```

Yes, it is ???

Advika09 - February 2, 2021, 9:48 am
I think if you change value="" to your mail it would change the mail
PHP Code
<?php
<input id="changeEmailEmail" name="changeemail[email]" class="text medium long light br4" value

="" type="text">
