Thread: [Which cryptocurrencies worth to mine with rig?](#)

codeventures - January 28, 2021, 9:49 am

I am currently mining TRON with my 2080ti while reading a little bit on GPU rigs and seems they are really easy to build, so I figured to build one with 8-10 gpus.

Anyone knows what are good coins to mine? I was thinking to mine newer coins with all the gpus, that way if one coin goes massive I could cash in quite well.

Someone could give tips for a beginner like me?

Ethereum is quite profitable atm

eCoLoGy - January 28, 2021, 10:21 am

ETH ETH and ETH.

That's it. ?

dBusta - January 29, 2021, 10:58 am

In my personal opinion ETH is good right now !?

codeventures - January 31, 2021, 4:06 pm

I mean it's profitable for sure after the price raise, but I don't think it would go 10k for example.

While TRON is only 0.032, I could mine this coin at the current difficulty and in 2-3 years it may be something massive like \$10?

You cannot mine with Tron's consensus it is not Proof-of-Work. Follow the advice of others posted above if you are actually trying to pursue mining. Ethereum.

Oh wow that's really weird I just read that on Google after you said it, but how was I mining Tron via this website? <https://unmineable.com/coins/TRX>

I mined about 32 tron just casually running it while gaming

Hewlett Packard - *January 31, 2021, 5:55 pm*

you can check here, <http://whattomine.com/>

Because they mine ETH then give you Tron.

Oh I get it, so basically I'd get just the same returns with Ethereum. Thanks for clarifying mate!
