Thread: [Is there any way to make a particular script run automatically when you insert a disk](#)

CactusRainbow12 - January 31, 2021, 10:06 am

Is there any way to make a particular script run automatically when you insert a disk on key into your computer? Sorry for the bad English and thanks for the helpers in advance.

Generally, not anymore (if we're talking about windows)

Yeah its been locked down quite a bit from an autorun perspective, however, you could install a listener on the device that will react to future disks being inserted.

I've had to build this for a server before, once the service is installed, it downloads a dictionary of instructions based on disk info. This was used to deploy software automatically (if the guys insert the disk with a setup.exe in root that matches the hash, we xcopy that to c:/temp and run a command line silent install and return the exit code in a popup so the tech guys can move on to the next machine)
