Thread: [SQLi DUMPER COLLECTION V10.2 - V9.7 - V8.5 - V8.3 \(ALL STABLE & CLEAN VERSIONS\)](#)

alien07 - February 9, 2021, 6:51 am

Today I'm gonna show you the Most Stable & Cleanest Possible versions of SQLi Dumper that people used to utilize for their SQL Injection purpose from past till now (from v8 to top)

You should understand the fact that even by saying "Most stable & cleanest possible", it doesn't mean 100% clean, but they were the cleanest versions you could find till now (as much as I know of)

You need some dependencies : (Install to avoid errors):

[Microsoft .NET Framework 4.6 \(Official Link\)](#)

[Microsoft Visual C++ Redistributable 2015 x64 \(Official Link\)](#)

Available Versions:

SQLi Dumper v10.2 (Cracked & Clean & Stable) - issues Fixed

SQLi Dumper v9.7

SQLi Dumper v8.5

Run with admin if you have trouble

Having problem with adding Proxy ?

Spoiler [\(Click to View\)](#)

The trick is to first copy the proxy list into your clipboard (3-4k for each time to avoid long time freeze)

Go to "Proxies List" section (left) > Click on "Append" > Select your proxy type (WEB PROXY = HTTP/S) > Hit "OK"

Wait till it adds all proxies (It also removes duplicates automatically)

Right-click inside proxy list and select "Check All" (Now there are ready to work)

Repeat to add more proxies
