Thread: [Chrome Auto Extension Installer \[Full Source Ownership\]](#)

I-GANK-I - February 10, 2021, 6:52 am

What I am selling:

Source code in c# for a Chrome Auto Extension installer builder

How it works:

You input extension Id , click enter and it will generate a bin.exe file.

This is the file which you want to run on the target computers where you want your malicious extension to be installed.

Once its run on target PC it will apply the force-install apps and extensions policy on the target machine. (This makes it impossible to remove from chrome extensions unless a remove extension bin is generated, which basically does the opposite .. it removes instead of installs extension.

What it includes:

- UAC Bypass from Win 7 to Win 10 Latest (Public methods)
- Method to get any extension into Chrome Store (Private method to always get passed google review)
- Method to camouflage chrome extension from extensions tabs
- Binary Files
- Source Files
- Free Future updates when I will migrate this to C++
- Bin Size of just 9KB !

Sneak Peak:

Scan (Uncrypted):

Note:

Selling slots are exclusive to just 1 person. I will not sell this to more than 1 person. neither will I use this by myself or have I used this in the past. (I just developed this for the purpose of selling this project).

Price: € 800 in BTC

Now selling also the bin's (Installs your Extension by ID)

Comes with the following:

- Guide how to get your extension in Google Store
- Source code of extension example which you can get passed google review (which will include your JS file in every page)
- A bin that also removes the extensionid (in case you want to test it on yourself)
- 3 Free rebuilds (in case you need another extension id)

Price: €100

Note: I do not do crypting services, the bin is FUD atm as no sales have been made yet, only I have it. I do not guarantee the FUD time once a sale has been made.

I'm interested, is this still available?

If so pm me or contact me on telegram: @ImShift

I will be releasing this for free in the PANTHERS section soon.
All panther members will be able to enjoy this first.

in 2 month's I will publish it on my website + source code through github.

Reason for release: I decided to keep the C++ Variant to myself, as the C# version is no longer used by me I decided to release it.

I shared the builder with Zeus (the owner of Panthers group) , if you are member of the Panthers group you can get it for free from him.

ryfvftrrff - October 21, 2021, 9:26 am

is still available,i need this for testing
