Thread: [What happens with the RAT if IP address is changed?](#)

naxster - February 13, 2021, 8:07 am

Hello guys!

For some reason my IP address changed and all my devices disappeared because of that. It's no worries since all of these devices were mine so I can easily just put it back again.

But when installing a RAT on a computer and if the host IP address somehow changes (like mine did). Is there a way to somehow get them back without having to install them all over again?

Can I switch the settings to the new IP address? :)

Stetsed - February 13, 2021, 8:29 am

Most rats have the option to move IP's, but once you lose your IP and you didn't do it before this happens no, there is no way to get them.

StarZ - February 13, 2021, 8:56 am

Why not use a dynamic dns like No-IP?

Or, In my router I have a setting to designate one local IP to one device, permanently.

Just don't use No-IP! Find others

3xploit - February 13, 2021, 10:12 am

Use a ddns service, but not "No-IP" as others have already stated because it's a well known honeypot (at least back in 2016).

Fire_Star - February 14, 2021, 5:39 am

Use a DNS Bro, If ur IP Addy is dynamic and changes everytime u logon u will lose ur clients

Thank you guys! Can you recommend any good DNS? :)

naxster - February 21, 2021, 5:05 am

Hello guys! Sorry for bumping this, but is DuckDNS any good and reliable??

I know that No-ip is not a good one, but what about DuckDNS? :)

With just a few clients it will probably be fine.

SeCat - February 21, 2021, 5:51 am

buy a bulletproof .ru domain <3 lolz

Would I need to buy a VPN if doing this?

Before I just used my own IP address, since it's my own computers at home. But the dam IP address changes all the time... It changes every week...

HUIU - February 21, 2021, 8:12 am

The best way is to use a dns

cafemev27 - April 10, 2021, 10:17 pm

This is the exact point of a dns also host on a rdp not ur main

Fluxe - April 11, 2021, 6:19 am

If this is ur own network I feel like a DHCP server would make more sense than a dyn dns but thats like just my opinion man

Ranker - April 12, 2021, 9:29 pm

If you were using your main IP from the ISP and it wasn't STATIC then your clients are gone forever now. Also it is very risky to use your main IP for that purpose. Try TOR [It's FREE, but most RATs doesn't have built-in feature] or VPN [PAID] service with dedicated ip and port forwarding option.

The thing is that I'm not going to mass spread the RAT... Only my use it on my computers, that's why I need something static... I thought of buying a DNS from Namecheap or if it's possible to create a DNS using Raspberry pi using Pihole.

If you are using it for your own machines, then give a try to "noip", its free.

I'm never going to use No-ip, I want a paid DNS not a free crappy one that shut down the account after 3 days

Can I switch the settings to the new IP address? :)

Use different hosting providers and put like 3+ backup IP's incase they get suspended

SIMPR - April 18, 2021, 8:39 pm

there's a way better ez method for that and you will be stress relieved once I tell you what it is.

dm me i'll help you with that.

Blusspider - June 21, 2021, 9:00 pm

anyone with good keylogger like loki?... please let someone reply me not a ripper

hazbot77 - June 21, 2021, 9:27 pm

That has nothing to do with this thread. Make your own thread here - [Keyloggers](#)
