Thread: [iCloud Bypass 2FA ?](#)

newuser99 - February 13, 2021, 9:26 pm

Hi all

Was wondering if it is at all possible to bypass 2 factor authentication linked to iCloud logins.

I have the Apple ID, Password and Phone Number of my target all confirmed as correct, but EPPB indicates that 2FA is applied.

Is there any way to bypass this without having access to the targets device. I have read that cookie stealing/phishing may be an option to hijack a session, but I don't know if this could be configured for Apple/iCloud data access.

Its frustrating knowing you have correct login information, but being stuck in a roadblock like this. Any further information would be appreciated.
