Off the bat, I haven't experienced any bugs or breaks with the program, which is one of the key things I look for when I use tools. I don't want something that will keep crashing especially depending on price points.

The overall simplicity of the tool was something I've had to get used to. The PDF provided certainly gave me a good amount of insight into what I was doing, and I had to ask OP a question here and there, but they were quick and seem to offer great support!

Now the most important part... yes the tool works! Greatly in fact, after playing around with settings and testing the video viewer on some dummy videos I uploaded I could certainly see it working. I had a few problems with browser versions but eventually got around that.

I can confidently say that this tool is well worth the price, if you already have a reason to use it in mind, a scheme or so fourth, I highly recommend grabbing this.

Good job OP!

The tool comes with a pdf which is really detailed and goes through each and every feature, my favourite one is the view bot itself, simply because I haven't found one that work for regular video uploads as youtube usually blocks them, but found it worked really well and increased the views for my video. I think the product would work really well if you have a few youtube accounts (I might have to buy a youtube account creator in the future as the commenting system seems to work really well with this tool).

Also FogFox himself is really helpful and responsive if you have any problems with the product he'll help you via PM or discord.

Excellent product and thanks for the vouch copy FogFox!

Seems like great customer service so far, eager to use the product and see how well it works!

Will be sure to leave a review on this once I get chance to give it a proper go!

Small review after some usage:

Awesome product, does exactly as it says on the tin!

Product came in a nicely packaged zip folder containing the main product files and a nicely written ebook to assist with the setup, the license key was handed to me quickly and I was setting the bot up in no time at all.

The instructions are very simple and easy to follow and once I got the bot running (it's still running) everything ran smoothly and I haven't experienced any issues at all as of yet.

Spoke with [FogFox](#) throughout the process and he explained that their are also future features to

come which I will be eager to see and use also.

Conclusion:

Great product which fits its exact purpose as described, great value for money!

[FogFox](#) is very easy to deal with and answered all of my questions quickly!

I am eager to see what future features and improvements are added to the product!

Big vouch for [FogFox](#)

Big vouch for [FogFox](#)

This post convinced me to try this product. I was wondering if there were any vouch copies available for additional review/trial? I will of course purchase for long term use just curious for a review trial copy, cheers! ?

I can give you a 24 hours vouch, but this will be the last one I give out.

**Stanley** - March 10, 2021, 1:44 pm

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,  
Stanley

Sorry for the delay had a long day of debugging/testing .... passed out and forgot to check back here lol ?

If you could DM me the vouch copy, I will gladly examine it and write a review!  
Regardless, I still will purchase a contract simply for the use case I need it for :)

and the previous review really upsold me on the product ???

**MichaelPhelps** - March 11, 2021, 3:22 am

Does the viewbot feature include any fingerprinting techniques or os/fingerprint spoofing beyond just User Agent & http proxies? Are you using a headless selenium FF browser or another headless? If selenium, have you taken precautions to prevent selenium detection?

We are working on some more advanced features atm. What do you have in mind? We are mainly working with Userprofiles and not headless because google uses heatmaps.

I already gave out five vouch copies and got good feedback from known members. I think that should be enough.
