What is the best way to cash out tether to my bank? I don't think it's possible to withdraw direct from binance to visa/bank right?

Should I send to my coinbase acc and transfer from there?

If I am not mistaken you can withdraw to bank acc on binance. I converted my money to Euro/USD etc, then withdrew to bank directly.

There might be better ways to do it tho

I usually trade my coins to GBP via USDT on SPOT market and then withdraw direct

You can link your bank account with the routing number and account number
