Thread: [\[Help\] Generate password list based on a WORD!](#)

Teleforce - February 17, 2021, 10:31 pm

Hi friends,

I want to know about a good method/tool for generating password list based on a word. For example we have a name "Elon" I want generate passwords such as
Elon12345 , Elon123456 , Elon12!@...etc

Thanks

sneezing panda - February 17, 2021, 11:19 pm

Since a super quick google didn't turn anything over, you could always try generating a list with the last bit and then inserting your word of choice in the beginning.

I have googled it but results are useless and brings no thing of what I need. Could you tell me more & how ?

Thanks buddy

Changing a few words in my search turned up this. IDK how well it will work, but from the .gif on the page it looks promising for what you are looking for.

<https://github.com/sc0tfree/mentalist>

EDIT: Tested it. Should be able to do what you want.

My Test [\(Click to View\)](#)
