Thread: [Building a Silent Miner](#)

zxPhantomBlade - February 18, 2021, 1:44 am

Hello,

I am trying to build a silent miner which uses xmrig and injects into a process. Now I have a problem to make it stealth. When the miner runs I can see a little console popping up. I already tried the -B (Background) setting and also tried to change the C++ code of the miner to make the console hidden but I still see it popping up. Can someone give me a solution to this?

SIM-4717218 - February 18, 2021, 3:53 am

it's because you use the main function, change it to <https://docs.microsoft.com/en-us/windows/win32/learnwin32/winmain--the-application-entry-point> and change the system to Console to Windows and the problem is solved nomally

There is a silent miner available on github, maybe you can find some information in it to inspire you !
