Thread: [DarkComet Client Not Showing](#)

AnonSurfer_344 - February 19, 2021, 3:24 pm

Hi,

I have tried DarkComet RAT but when I run the stub the client won't show I have tried on my local computer and I have tried in WAN and I have port forwarded and deactivated the firewall but it still doesn't work, If anyone has a solution for this please let me know.

Thanks.

It's probably the ratted dark comet i had this problem and it turned out they were infected ones. Couldn't find a clean version I switched to NanoCore to RAT my teachers was the best option back then for me.

That was like 3 years ago. Our school ran only on laptops and projectors, no books nothing. Just laptop. So when my turn came up to present in a group I'd get my USB which had my presentation and my RAT. My friend would start presenting and i had extended screen mode when presenting, thus i could do anything from the teacher's laptop without showing on the projector. I'd do everything I need, allow the file to run on windows defender, and voila she goes back home and i get my tests. But i eventually got caught. The IT had a new system implemented where they could see what files we had on our laptops, and they saw tests and RAT running.

Cool Fact, the IT caught me but did not report me probably cuz his ass was on the line and a kid was able to get the Tests. And our school was sponsored by Microsoft. So yeah.
