Thread: [Is Dark Comet a thing still?](#)

**SweeTs** - February 21, 2021, 2:51 am

Okay so to be honest its been about since 2014 maybe longer since I've been into RATTING, I was also into ddosing in the JAYS booter days lol, bust anyway I experimented with many RATs back then premium and free, And out of all Dark Comet was my favorite. But I also heard dark comet got super infected. was it just a version update if so what version do i need?

That's also leading me to my next question is there any other free RAT programs that are better since its been so long? If not better any that compare that are safer if dark comet is as bad as I've heard trying to get a clean version,

Im asking IF DC is still good, Is there new free ALTs? and i may be open to premium if worth it

TIA for the help I've been gone awhile

**Mewtw?** - February 21, 2021, 3:00 am

Ahaha it has been a long time indeed.

Cybergate was my favorite, DC got super infected I remember and no one could use it afterwards.

I don't know as I'm an old user myself, but I looked at the premium sellers section and seems like there are new RATs, you can take a look.

Cybergate was good aswell, do you happen to have Any versions of DC thats clean or even cybergate if it was a free one to cant remember or is it still legit from a website itself

or you think theres any free ones worth af? Id pay but I kinda want to test it since I been outta the game so long lol

**Mewtw?** - February 21, 2021, 3:21 am

10 years ago was the best for RATTING, I left the game personnaly like 5 years ago as well haha.

Tbh, I think the new rats are more stable so if I were you, I would not expect anything from DC or Cybergate.

Impossible to find a real link actually I think for these 2.

Do you remember XR Hostbooter as welll ? I remember about JAYS haha

**SweeTs** - February 21, 2021, 3:31 am

Good old times.

Yes I perfectly remember all the skids coming for Jays and asking for help because they wanted to boot people in call of duty, counter strike : source, steam, runescape etc ...

I did not even know e-whoring was still a thing, as I also did this like 10 years ago, same with PPA, PPI and other monetizing techniques.

This forum made me learn ton of things and I miss my +1000 reputation hahahah. (dont even know why I lost all)

For everyone who joined in that period of time would be asking for modded lobbies lol, I remember for some reason everyone wanted to use Cain And Abel to find IPs on 360/ps3 then use Jays Booter and it was also for gamebattles on Halo 3 or MW2 lol I feel like but I always preferred Commview as my ip grabbed as it seemed more professional per-say imo.

I now remember the only premium I paid for it was BlackShades before they went south, At least I believe it was blackshades,

, so now thyeres one called DarkShades sounds similar i wonder if its the same in any way or worthy it like blackshades was when super hyped before they went corrupt

I gave jay the idea to slap on a skin to the booter and resell it, it was actually the original creators source modified lol. Everyone else started doing it and there were hundred of sales threads with shitbooters.

I was a Nanocore kinda guy back then ahaha,  
it's been a while.

**1a2b3ccc** - June 3, 2021, 9:21 am

Darkcomet, ahhh the good days ;)

**Malthemar** - June 3, 2021, 9:34 am

I thought that the owner released a remover and DC died?

**Silkroad** - June 3, 2021, 9:40 am

The creator Jean-Pierre Lesueur (DarkCoderSc on here) got arrested back in 2012 after Syria used DarkComet to spy on their own people.

I was in contact with him in late 2019 and he said he moved on from illegal stuff and that DarkComet's source was used by most AV companies as a base-code for RATs. It's really hard to crypt and get it FUD because of that.

I wouldn't use darkcomet or any other RATs that were raided in the past (like BlackShades).

**hazbot77** - June 3, 2021, 4:16 pm

I dont think DC even works on windows 10, shame it was a good rat for its time.

Jesus Christ, Cybergate and Spynet both were everywhere back in the day. Throws me way the fuck back.

Damn, you described my situation in two sentences, that was emotional.

**618C** - June 4, 2021, 5:12 am

oh man brings back memories;

Netbus, Sub7, Darkcomet, Blackshades, nanocore, af few others that i cant remember the name from..

Great times learned a lot, im staying away now from ratting :)

To answer your question, no DC is not a thing anymore, a lot of big RAT providers have been raided by the feds. they even went ahead and arrested people who where a paying customer of them.

A couple of free ones for you to play around with ?

<https://github.com/quasar/Quasar/releases>

<https://github.com/NYAN-x-CAT/AsyncRAT-C-Sharp/releases>

**Eladictocosity** - June 28, 2021, 12:08 pm

I think some people still try using that for tests, etc.

**RoofPriv** - June 28, 2021, 3:16 pm

Quasar is decent and probably the best free RAT, but the keylogger sucks the, offline keylogger works but it doesn't function properly, I would recommend to buy the BitRAT with a VPS from CrazyRDP it's way better and you are good to go :)
