Would like to know your guy's thoughts on GRT.

Looking pretty good at the moment, my PT is around \$10-12 EOY.

Yeah I don't think this is very likely at all.

Just look at the private sale / seed round unlock amounts and prices they paid for each GRT.

I got some free GRT on coinbase a few months ago from watching the videos. Was like \$3 now its worth \$20. 4chan loves the coin and talks about it non stop so with that pumping it up it could probs hit \$10

What they do is amazing, they are like the Google of the future Web 3.0.

Heck, even Pancake swap reached out to GRT To integrate it because they couldn't handle doing it on their own with a Fork of GRT's tech

GRT isn't just a token, it's its own can of worms, one of a kind and every major blockchain will want to integrate its functions because it's just too much of a burden to do it on your own

Easy

There will be around 9b-10b Graph tokens 48 months after the launch of mainnet. Currently there are 1.25B so that alone is 7-8x increase in the supply. So you think that the market cap will 1400-1600x from here (1T mc)?
