Thread: [Is it safe to use your own IP address using Pastebin?](#)

naxster - February 22, 2021, 1:52 am

Hello guys!

Im going to use AsyncRat since it have a Pastebin option and that it works great!

I'm just looking for a good option to use my RAT without having a slow download speed...
I have tried [censored] but the download speed is REALLY slow...

I have also read some threads that NyanXCat recommends to use Pastebin instead of DNS, but I can't ask him any further questions due to he decided to close his account, which is sad :(

Anyway if I create a account in Pastebin, write my IP address IP:Port and make it private. Should that be good enough? Or is it still too risky?

I'm not planning to RAT unknown computer, only computers I own. The reason for this is because my IP address changes almost every month (dynamic IP), which is annoying if I have to re-install the RAT again and again every month, even though it is on my own computers...

And I don't want to use free DNS since they usually suck and I don't know any good reliable, secure paid DNS for this situation, so I thought that Pastebin is probably the "best" situation since NyanXCat also mentioned that indirectly.

SeCat - February 22, 2021, 3:46 am

if that is what NyanXCat needs in the pastebin file, it should be enough and a good replacement for a dns.

naxster - February 22, 2021, 4:50 am

(Feb 22, 2021 04:46 AM)SeCat Wrote: [\[CITE\]](#) if that is what NyanXCat needs in the pastebin file, it should be enough and a good replacement for a dns.

Maybe I misunderstood what he meant, but here is his post;

<https://hackforums.net/showthread.php?tid=5874717&pid=57482243#pid57482243>

Still want to know if it's safe to use my IP address, even though I'm only going to use it on trusted computers since they are my own.

The good thing with these kind of stuff is that when my IP address changes next month or so, I can just edit it in Pastebin...

I would like to know that aswell, i currently using BitRat and with the TOR feature it's not able to crypt or it could break something so i want to set it up with DNS.

naxster - February 24, 2021, 7:27 am

Does anyone knows an answer? :(

Fluxe - February 24, 2021, 7:32 pm

wouldnt recommend it, pastebin scrapers have existed for years. i mean if u dont care abt ppl seing ur ip then it doesnt matter but idk I wouldnt

3xploit - February 25, 2021, 7:56 am

Sorry to say but this sounds very stupid to me.

naxster - March 14, 2021, 10:02 am

Stetsed - March 14, 2021, 10:10 am

(Mar 14, 2021 10:02 AM)naxster Wrote: [\[CITE\]](#) Then what do you recommend? :)

(I will answer with what I suggest)

Well to begin with I would suggest not hosting it on your own device, This is just a basic rule of thumb it's never smart to host stuff on your personal computer.

If you use a good bulletproof host paid with XMR or another crypto you should be fine.

Xhibit - March 14, 2021, 2:55 pm

"Is it safe to use your own IP address using Pastebin?"

C'mon common sense should answer your own damn question here.

- Look at it this way, if you feel the need to ASK if its safe, your obviously thinking its risky to start, yea?

That should be a good first indication.

Obistone - March 14, 2021, 2:57 pm

If you make the pastebin entry private AsyncRAT's client binary won't be able to access it anymore. Even if it could access the entry, using your home IP is a terrible idea.

naxster - March 15, 2021, 6:52 am

Then what can I use? I've tried VPN before, but I always have get a new IP address and it reduces the download speed by more than half :(

Use a VPS.

GigaZero - March 15, 2021, 3:48 pm

you can use bulletproof cpanel

If you value your own privacy, it should matter, and you probably shouldn't use it. Otherwise, use it

Australia2002 - March 31, 2021, 1:35 am

Hey,

If you care about people seeing your IP; No

If you don't care that much; Go ahead, although if someone is bored enough, they could try to find a vulnerability in your network.

If you want a reliable DNS, try noip(.)com, I have used it for a while and haven't had any problems with it.

Good luck

Furiosa - March 31, 2021, 1:50 am

better i try to protect myself alone then someone else to sell me easily.

VM + VPN + DNS paid with crypto.

as long VPN its good no worries for u

Sexy Name - March 31, 2021, 6:50 am

nahh just shell some websites create subdomain redirecting to your ip and ur good to go.

naxster - April 1, 2021, 7:57 am

Can you recommend a good paid DNS?
I'm already using a VM and I have [censored]. :)

(Mar 31, 2021 06:50 AM)Sexy Name Wrote: [\[CITE\]](#) nahh just shell some websites create subdomain redirecting to your ip and ur good to go.

How do I do that? :O

And from which website (preferably a good website) can I create subdomains?? :)

Furiosa - April 1, 2021, 11:52 am

yes try namecheap and buy it with crypto, that's my recomendation

Hmm,

I just read about this; Thank you for correcting me.

Have a nice day everyone and sorry for the false info.

Should I buy a domain and the DNS called "PremiumDNS"?

Or which package should I get? :/

There is automative out of date plugins scanners, using them u find vuln websites with critical vuln.

After that u exploit these vulns. To get info how to exploit them use search engine like google or something.

VM + VPN + DNS paid with crypto.

as long VPN its good no worries for u

Stupid question, from which site can we use crypto to buy Namecheap from?

I can create an Binance/Coinbase account but I'd have to use my real passport etc (which is more than okay).

But to be completely anonymous won't is there any other way? :)
