Thread: [Can a GPS Location be tracked with just a Phone Number?](#)

SIM-2998667 - February 27, 2021, 9:23 am

A friend of mine asked me for urgent help with seeing real-time location of a Mobile Phone, without having direct access to that phone.

He knows the Phone Number of the sim card that is on that Phone
He knows the identity of that person

Goal : Real Time Location Tracking

If anyone can help me out with it, send me a message.

Thanks

Hey!

Well does he also know the Gmail and pass of the person?
Because then it's easy!
Unfortunately there are no tools like just searching the location of a person.
You probably need to exploit the telecom provider for information like that.

Hopefully this answer will help you!

Regards,

Having the phone number would be enough if you were law enforcement. However for everyone else the only way would be slipping some spyware on the phone.
